Rules for traveling between regions: what documents do passengers need?

SHARE

28 October 2021

64

On October 21, new rules for interregional transportation at the yellow and red levels of epidemic security came into force. They relate to regular and irregular transportation. We are talking about road transport on bus

routes, air and rail transport of interregional communication.

The rules will not apply to urban and intra-regional transportation.

To use interregional transport in regions with yellow and red levels of epidemic security, passengers will need to have one of the following documents:

“yellow” or “green” international or domestic COVID-certificate issued on the portal “Diia” or in the application of the same name based on receiving a single dose of the vaccine or a full course of vaccination;

foreign COVID-certificate

of vaccination
with vaccines
that are included
by the WHO to
the list of
allowed for use
in emergency
situations;

document
on receiving a
single dose of
the vaccine –
form 063-o,
which can be
obtained
immediately after
the procedure
from the doctor
who carried out
the vaccination;

international
vaccination
certificate, which
will be valid for
one year from the
date of the last
vaccination. It
can be issued by
the doctor who
carried out the
vaccination at
the vaccination
point of the
health care
institution, or by
the family doctor;

negative
result of a PCR
test or rapid test

for COVID-19,
valid for 72 hours
from the time of
submission of
the material for
analysis;

certificate
based on
recovery.

The passenger is
responsible for
the availability of
the relevant
document on bus
routes, and the
carrier is
responsible for
railway and air
transport.

The carrier is
obliged to inform
passengers that
they must have
one of the
necessary
documents.

The rule on the
presence of a
vaccination
document or a
negative test
does not apply to
minors.

The new rules do
not apply to
transportation by
passenger cars if
the number of

passengers is no more than five (excluding children under 14 years of age). At the same time, a larger number of passengers are allowed, provided that they are members of the same family.

Soon, unvaccinated Ukrainians who have had a coronavirus infection will be able to receive a digital COVID certificate of recovery, which will allow them to work, visit institutions and move around in the yellow and red quarantine zones without restrictions for 90 days (in accordance with the specifics of the Cabinet of Ministers Resolution No. 1236).

The certificate of recovery will be

generated only for those who have been diagnosed with COVID-19 by their doctor from the moment the functionality of the new certificate is launched and in the future. The document will not be generated if your COVID-19 diagnosis was established before the new type of certificate appeared, i.e. in 2020 or earlier in 2021.

At the same time, the mandatory basis for its generation will be the doctor's medical record of the established diagnosis, which will be displayed in the electronic health care system (EHCS). In other words, people who did not go to the doctor after receiving a positive PCR test

and the doctor did not enter the data to the EHCS will not be able to download the certificate.

Obtaining paper certificates on the fact of a coronavirus disease is not provided for by law now.

Thus, starting from October 21, for interregional trips on public transport, you can use either a document on vaccination against COVID-19, a negative test result for COVID-19, or a certificate of recovery.
